

ABSTRACT OF THE DISCLOSURE

Information is transferred between a server system and a client system. Network data that includes a portion having state information is received from the server system. The portion is removed from the network data, and state information is appended to at least one address that corresponds to a link located in a remaining portion of the network data. The remaining portion of the network data is transmitted to the client system. Thereafter, a request is received from the client system and includes an address. A portion having state information is removed from the address, and the state information is formatted. A remaining portion of the address and the formatted state information are transmitted to the server system.
